DETAILED ACTION***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitation "a stage of converting terminal voltage of the capacitor to a logic signal and outputting the logic signal" and "a stage of converting terminal voltage of the capacitor to a logic signal and outputting the logic signal" (lines 7-10) must be shown or the feature(s) canceled from claim 7. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to under 37 CFR 1.71, as being so incomprehensible as to preclude a reasonable search of the prior art by the examiner. For example, the following items are not understood: “a stage of converting terminal voltage of the capacitor to a logic signal and outputting the logic signal” and “a stage of converting terminal voltage of the capacitor to a logic signal and outputting the logic signal” (claim 7, lines 7-10).

Applicant is required to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

Claim Rejections - 35 USC § 112

Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 is rejected as being indefinite since it is unclear how the limitations “a stage of converting terminal voltage of the capacitor to a logic signal and outputting the logic signal” and “a stage of converting terminal voltage of the capacitor to a logic signal and outputting the logic signal” (lines 7-10) read on the preferred embodiment. In order to avoid any confusion, Applicant is required to particularly point out how the limitation of claim 7 reads on the circuit arrangement of the drawings. As understood, claim 7 is appeared to read on Figs. 3, 5(a) – 5(b) and 20, if a stage of which a plurality of clocks

is referred as (107, 108), the switch group is referred as (100), a capacitor is referred as (C), timing dividing circuit is referred as (106), then a stage of converting terminal voltage of the capacitor might read on (110) and the stage of varying charging and discharging speed of the capacitor might read on (109), however, 110 will not converting terminal voltage of the capacitor (C) to a logic signal nor 109 will varying charging and discharging speed of the capacitor (C) by shifting switching control timings of switches in the switch group (Fig. 5a). Thus, the metes and bounds of claim 7 are difficult to determine as presently recited.

Therefore, there is no prior art applied at this time.

The copy of form 1449 (filed 7/28/03) will submit with next communication.
